

INDATA VIDEO SERVICES

Video tells a story no mere text document can convey, adding the richness of body language and attitude to deposition transcripts. inData's Video products and services put the power of persuasion in your hands.

Pioneers of the advanced technologies that bring your video depositions to life, inData software makes deposition encoding, synchronization, and review fast, efficient, and reliable:

- ▶ DepoView® - Video Review Software
- ▶ TimeCoder™ Pro - Deposition Synchronization Software
- ▶ Encoding & Synchronization Services - inData will quickly encode and sync your video depositions, at reasonable prices

inData offers complete video encoding and synchronization services. No matter the size of the project, we'll give your single-tape project the same care and attention as your large projects.

Our video technicians are trained in the very best quality control processes, assuring your tapes and CDs are processed properly and on time. Every video project is backed by inData's 100% satisfaction guarantee.

What is encoding and synchronization?

Encoding

Encoding is the process of converting deposition video tapes to a digital format stored on a CD or DVD. You get quality video that runs on your computer, and is easily duplicated.

Synchronization

Your encoded video file is synchronized with the court reporter's ASCII text. Synchronized depositions are the easy way to review testimony, locate key elements, and create and export video clips that contain both the video and the relevant text.

For a complimentary estimate on synching and encoding projects, call us today at 800-828-8292 or e-mail us at info@indatacorp.com.
